

Woodmoor

WOODMOOR

LEARN MORE

Bold, rustic Woodmoor Shingles are designed to dramatically transform our home with the extra-thick dimension and rich texture reminiscent of wood shake but with greater durability and less maintenance. They also offer peace of mind by meeting the highest fire-resistance standards in the industry, Class A. Best of all, Woodmoor shingles come in distinctive color blends that are inspired by nature but not limited to it—giving your roof a pop of color you can't get from real wood. As compared to Woodcrest Shingles, these shingles are thicker and heavier in weight.

Description

- Wind Resistance

Significant wind can cause shingles to blow off the roof deck. Missing shingles can lead to leaks and other interior damage. The quality and performance of the sealant on a shingle helps plays an important part in wind resistance performance. Owens Corning certifies our shingles to industry recognized wind resistance standards through independent third-party testing laboratories. To see the wind resistance warranty on this product, refer to the TECHNICAL SPECIFICATIONS tab.

- **Algae Resistance**

Algae growth may cause brown to black streaks on roofs but this discoloration does not impact the service life of the shingles. Algae species are transported through the air and growth occurs to varying degrees in all regions of the country; especially those subjected to warm, humid conditions. Algae should not be mistaken for fungus growth, soot, dirt, or moss. Almost all types of roofing systems are susceptible to algae discoloration. Where noted on the individual Product Detail page Technical Specifications tab, Owens Corning provides limited warranty coverage on some of our shingles for algae resistance. For full details of coverage, refer to the actual warranty for details, limitations, and requirements.
